

AAGWa Crop Production

Forecasts Brief Series

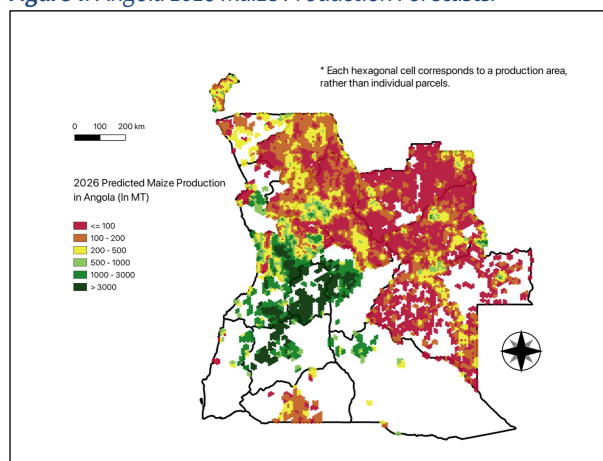

Angola – Maize

Mansour Dia*, Aïssatou Ndoeye*, and Khadim Dia**

No. 333, February 2026

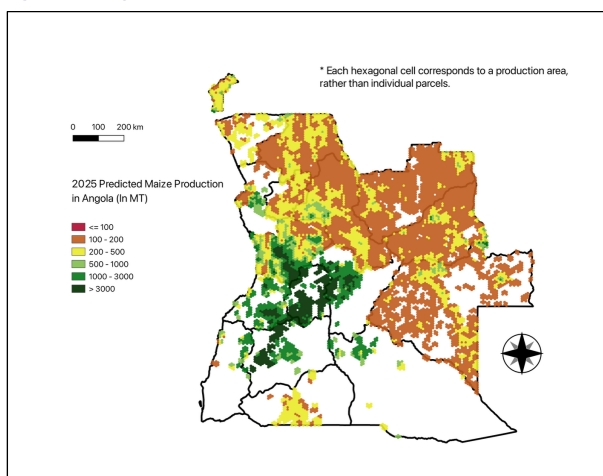

The crop production forecasts brief series by AKADEMIYA2063's Africa Agriculture Watch (AAGWa) aims to provide more accurate and timely data on harvests and yields for 11 major crops across nearly 50

Figure 1. Angola 2026 Maize Production Forecasts.

African countries. The timeliness, wide availability, and easy access to this type of data will allow stakeholders across the value chain to better plan and execute policy and business actions more efficiently. The data published in the briefs are generated through the Africa Crop Production (AfCP) model, an Artificial Intelligence (AI)-based model applied to remotely sensed geo-biophysical data to produce estimates at pixel as well as administrative levels as early as the beginning of each growing season. In Brief 333, we provide forecasts on maize production in Angola.

In 2026, maize production in Angola is projected to reach 3,636,097 metric tons (MT), a 2% increase over 2025 production levels. The highest maize producers are expected to be Caála (Huambo), Cassongue (Cuanza Sul), Cubal (Benguela), Catabola (Bié), and Ebo (Cuanza Sul), with production levels estimated at 250,059 MT, 207,143 MT, 133,524 MT, 115,108 MT, and 109,473 MT, respectively. In contrast, lower production values are observed in Rivungo (Cuando Cubango), Pango Aluquém (Cuanza Norte), Cahama (Cunene), Cazenga (Luanda), and Kilamba Kiaxi (Luanda) with production of 84 MT, 54 MT, 48 MT, 26 MT, and 25 MT, respectively.

Compared to 2025, the most significant maize production increases in 2026 are expected in districts such as Caála (Huambo), Cassongue (Cuanza Sul), Cubal (Benguela), Ebo (Cuanza Sul), and Catabola (Bié), with differences of 25,678 MT, 22,506 MT, 16,453 MT, 12,053

MT, and 10,817 MT, respectively. These correspond to changes of 11%, 12%, 14%, 12%, and 10%.
